Summary

AI and automation engineer with about three years of experience building and shipping LLM-based applications. At FlowSpace I built support agents with tool use that answer against live platform data and escalate to a person on low confidence, and an LLM ingestion pipeline with human review that takes PDFs, web pages, photos and spreadsheets and drafts the full listing (900+ listings drafted). I led a live migration off a legacy stack: mapped the data model, chose the migration path per entity (API or CSV) and drove the cutover for 4,500+ users. I work with RAG, function calling and MCP, TypeScript and Python (working level), SQL and Claude Code. Bachelor's in Philosophy, International Studies & Economics. Based in Venice, open to relocating to Warsaw, available immediately.

Lead Developer (Full-time, Freelance) *London, UK (remote)*

- Built an AI listing bot with a human in the loop: it takes a brochure in any format (PDF, web page, photo or spreadsheet), drafts the full listing with an LLM, and pushes it to the backend after review. 900+ listings drafted.
