Application: AI Engineer, Aceve

Dear Hiring Team,

I am applying for the AI Engineer role. Scoping a problem with a business team, building the AI solution and staying close until they actually use it is how I have worked at FlowSpace.

There I built support agents that answer against live platform data and escalate to a person on low confidence, an LLM ingestion pipeline with human review that drafted 900+ listings from PDFs, web pages, photos and spreadsheets, and CRM lead-capture integration and GTM automations (sales funnel, lead enrichment, outbound) with n8n. I work with the Claude and OpenAI APIs, RAG, tool use and MCP, and I worked directly with the sales and operations team and an external agency.

On the gaps: I do not have a degree in computer science, mine is in Philosophy, International Studies and Economics, and I learned engineering on the job. I have not used LangChain or LlamaIndex, I have not done fine-tuning, and my quality checks are human review and confidence thresholds rather than evaluation frameworks. I have not run workshops or training sessions. My Python is at working level.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Stockholm for the hybrid role, and I work in central European time, close to Nordic time zones. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
