Application: Forward Deployed Engineer (100% Remote), Giant Swarm

Dear Hiring Team,

I am applying for the Forward Deployed Engineer role. Building agentic solutions with MCP and tool use inside a customer's own context, and leaving them something they can maintain, is the work I do best.

At FlowSpace I built support agents that answer against live platform data and escalate to a person on low confidence, and an LLM ingestion pipeline with human review that drafted 900+ listings from PDFs, web pages, photos and spreadsheets. I integrated third-party APIs over REST, webhooks and OAuth, led a live migration off a legacy stack, and worked directly with customers, the sales and operations team and an external agency. I use MCP and Claude Code.

On the gaps, and I want to be plain about the main one: I do not have a working understanding of Kubernetes or cloud-native operations, and I have not worked on a platform built on it. I have not held a Solutions Architect or Forward Deployed Engineer title, and I have not run workshops or developer enablement sessions. I have about three years of experience.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I work in Italy, so my day sits within UTC +/- 2 hours of Europe, and fully remote suits me. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
