Application: Full Stack Engineer (Automation & AI Agents), Hostinger

Dear Hiring Team,

I am applying for the Full Stack Engineer (Automation & AI Agents) role in the Delivery Automation team. Looking at how a team works, finding the repetitive part and building a tool they actually use, with an AI agent where it fits, is the work I have done for about three years.

At FlowSpace I built support agents that answer against live platform data and escalate to a person on low confidence, and an LLM ingestion pipeline with human review that drafted 900+ listings from PDFs, web pages, photos and spreadsheets. I also built CRM lead-capture integration and GTM automations (sales funnel, lead enrichment, outbound) with n8n, and led a live migration off a legacy stack to a coded Next.js and Laravel product while the platform grew from 2,000 to 4,500+ users. I work in TypeScript and Node.js, use MCP and tool use, test with Playwright, and gathered requirements directly from the sales and operations team. Claude Code is my default way of building.

On the gaps: I have not built CI/CD pipelines or GitHub Actions workflows, and I have not built integrations with Slack, SonarQube or CI/CD platforms. My frontend experience is Next.js, not Vue. I have not built a coding agent or internal developer platform. My Python is at working level, alongside TypeScript. My degree is a Bachelor's in Philosophy, International Studies and Economics.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Vilnius for the hybrid role. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
