**Application: AI Solutions Engineer, Metyis**

Dear Hiring Team,

I am applying for the AI Solutions Engineer role in Amsterdam. Taking a business challenge and turning it into a well-designed AI workflow, and documenting it so others can reuse it, is the work I have done for about three years.

At FlowSpace I built support agents that answer against live platform data and escalate to a person on low confidence, and an LLM ingestion pipeline with human review that drafted 900+ listings from PDFs, web pages, photos and spreadsheets. I also built CRM lead-capture integration and GTM automations (sales funnel, lead enrichment, outbound) with n8n. I work with prompt and context engineering, RAG, function calling and MCP, use Git and Claude Code, and gathered requirements directly from the sales and operations team.

On the gaps: I have not used an orchestration framework such as LangChain, LlamaIndex or LangGraph. I have not built knowledge graphs, ontologies, data lineage or governance frameworks, and I have not done memory or harness engineering. I have not held a consulting or data science title. My Python is at working level, alongside TypeScript. My degree is a Bachelor's in Philosophy, International Studies and Economics.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Amsterdam. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
