Dear Omilia Hiring Team,

I am writing to express my strong interest in the Technical Demo Engineer position at Omilia. Designing and building high-impact, enterprise-grade conversational AI demonstrations that bring complex architectures (NLU, ASR, LLM orchestration, and deterministic guardrails) to life for technical evaluators and enterprise decision-makers aligns directly with my production engineering and pre-sales background.
Over the past three years as Lead Developer at FlowSpace.co, solutions developer with Urlink in Barcelona, and independent technical consultant, I have operated continuously across conversational automation, API integration, and interactive demo delivery:

- **Conversational AI & Interactive Demos:** Designed and maintained the production conversational AI runtime serving 4,500+ active enterprise users, and built customized live demonstration environments showcasing real-time API integrations, intent classification, and structured multi-turn dialogue.
- **Pre-Sales Heartbeat & Technical Discovery:** Partnered with commercial stakeholders and prospective enterprise clients through discovery, technical deep dives, and custom proof-of-concept solutions, translating complex AI capabilities into clear, business-critical value propositions.
- **Production Rigor & Tool Integration:** Deep hands-on development in Python and JavaScript/TypeScript, integrating backend systems via REST APIs, webhooks, and strict JSON schemas to ground conversational agents deterministically against live databases.
- **Evaluation & Enterprise Readiness:** Built trace-level evaluation harnesses over real interaction logs to eliminate hallucinations, enforce fallback escalation paths, and optimize latency and inference efficiency in mission-critical environments.
- **Location & EU Authorization:** Based in Venice, Italy, holding an EU Long-Term Residence Permit with unrestricted permanent EU work authorization (no visa sponsorship required). Fully available immediately for full-time or B2B engagement.

I would welcome the opportunity to discuss how my hands-on conversational AI engineering, pre-sales demo creation, and systems integration expertise can help Omilia showcase its enterprise conversational platform and accelerate adoption.

Kind regards,

Prabhavit Gupta
