**Motivation letter for Application for Forward Deployed Engineer – London, United Kingdom**

Dear Hiring Manager,

I am writing to apply for the Forward Deployed Engineer role at SolveAI. Your opening line is the whole reason I am applying: most enterprise problems never get solved because the person who understands the problem and the person who can build the fix are never the same person. Closing that gap in person, by sitting with the people closest to the problem and shipping something in days rather than months, is the work I have been doing for three years, and your note that you are equally interested in engineers who want to make the jump into this role is what made me write rather than filter myself out.

Over the past three years, I have successfully transformed abstract business requirements into production-ready features across multiple European technology projects spanning different countries and sectors; from a sports management platform in Luxembourg to strategic consultant platforms in France and Spain.

Operating extensively as a freelance AI Solutions Developer, I engineered AI-based data parsing tools using n8n for UltraStrategy, automated complex workflows for Get2Germany, and executed rigorous quality assurance and API integrations for Clubee.

During my tenure at FlowSpace (based in London), I took over an already built system and managed it until its eventual migration to Next.JS and Laravel. Alongside debugging the system, I also partook in GTM automations using their CRM. I engineered AI agents and automated data parsing tools that directly contributed to scaling the platform from 2,000 to over 4,500 active users.

My daily engineering workflow revolves around the exact requirements outlined in your role: I utilize prompt chaining, RAG architectures, and advanced workflow orchestration tools (such as n8n) to connect external APIs with foundational models like OpenAI and Anthropic's Claude, and I build in TypeScript, Next.JS, React, Python and Laravel depending on what the environment already runs. Adaptability is not a claim I have to make abstractly: the freelance work for UltraStrategy, Get2Germany and Clubee each came with someone else's stack and a problem rather than a spec, and at FlowSpace I took over a system I had not written, debugged it, and carried it through a migration while it scaled from 2,000 to over 4,500 active users. I am also comfortable with the travel this role involves. Being straight about it: I have around three years of experience rather than a long enterprise track record, and I would need a UK work visa, which I mention now rather than later.

I extensively leverage AI coding assistants like Claude Code and bolt.new alongside low-code platforms and modern frameworks (TypeScript, Next.JS, Laravel, Supabase) to rapidly test hypotheses and deploy MVP architectures. I am also open to learning new systems and tech stacks; I recently completed a course in Microsoft Copilot and AI agent orchestration.

As a graduate of Ca' Foscari University, I have been living in Venice for 5 years, hold a European Long-Term Residence Permit requiring no visa sponsorship, and have the professional English proficiency required for international collaboration. I am also fully available for short and medium-term business travel as project demands.

I would be glad to talk about an enterprise problem you have taken from first conversation to something running.

Thank you for your time and consideration.

Sincerely,

Prabhavit Gupta
