Application: AI Solutions Engineer (Applied AI), Sales & Customer Services, Danfoss

Dear Hiring Team,

I am applying for the AI Solutions Engineer role in Sales and Customer Services. Sitting with a business team, finding what slows them down and getting a working AI-enabled tool into their hands is the work I have done for about three years.

At FlowSpace I built support agents that answer against live platform data and escalate to a person on low confidence, and an LLM ingestion pipeline with human review that drafted 900+ listings from PDFs, web pages, photos and spreadsheets, with a review step before anything reached the backend. I also built CRM lead-capture integration and GTM automations (sales funnel, lead enrichment, outbound) with n8n. I gathered requirements directly from the sales and operations team, prototyped with Claude Code, and wrote the documentation and handover for what I shipped. I work with LLM APIs, tool calling and MCP, and write Python at working level alongside TypeScript.

On the gaps: I have not held a solution engineer or consulting title, and my total experience is about three years, so I meet the 3+ years requirement at its lower end. I have no background in pricing, quotations or product information management, and I have not worked in a global industrial company. I have not built formal measurement of adoption or business value beyond user feedback. My degree is a Bachelor's in Philosophy, International Studies and Economics.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Zagreb. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
