Application: AI Engineer (LLMs & Agents), Elixirr Digital

Dear Hiring Team,

I am applying for the AI Engineer (LLMs & Agents) role in Zagreb. I build agents that act on live data and I use AI coding tools as my default way of working, with a clear habit of checking what they produce.

At FlowSpace I built support agents that answer against live platform data and escalate to a person on low confidence, and an LLM ingestion pipeline with human review that drafted 900+ listings from PDFs, web pages, photos and spreadsheets, where nothing reaches the backend before a person has reviewed it. I work with tool use, function calling, RAG and MCP, and Claude Code is how I build. I also built CRM lead-capture integration and GTM automations (sales funnel, lead enrichment, outbound) with n8n. My public GitHub, github.com/prab-gupta, includes llm-doc-parser.

On the gaps: I have not used LangChain, Google ADK or AutoGen. I have no formal machine learning background in deep learning or fine-tuning, and I have not built tracing or evaluation tooling: my quality checks are human review and confidence thresholds. My Python is at working level, alongside TypeScript. My degree is a Bachelor's in Philosophy, International Studies and Economics. I have about three years of experience.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Zagreb. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
