Application: AI Engineer (AI Enablement), Hypefy

Dear Hiring Team,

I am applying for the AI Engineer (AI Enablement) role. Sitting with a team, finding where their week gets stuck and shipping the smallest agent or tool that helps is how I have worked since 2023.

At FlowSpace I built support agents that answer against live platform data and escalate to a person on low confidence, an LLM ingestion pipeline with human review that drafted 900+ listings from PDFs, web pages, photos and spreadsheets, and CRM lead-capture integration and GTM automations (sales funnel, lead enrichment, outbound) with n8n. I use Claude Code, MCP, tool use and the Claude and OpenAI APIs, and I worked directly with the sales and operations team and an external agency.

On the gaps: my quality checks are human review and confidence thresholds, and I have not built evaluation pipelines or tracing with tools like Langfuse. I have not built Claude Code plugins or custom agent harnesses, and I have not worked with SQL warehouses such as DuckDB, HubSpot, Microsoft 365, Azure or Vercel. My degree is not in computer science, and my Python is at working level next to TypeScript.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Zagreb for the office-based role. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
