Application: AI Engineer, Tools & Automations, Labhouse

Dear Hiring Team,

I am applying for the AI Engineer, Tools and Automations role. Walking into a company, finding the slow manual process and building the tool for it end to end, is the work I have done at FlowSpace.

There I built support agents that answer against live platform data and escalate to a person on low confidence, an LLM ingestion pipeline with human review that drafted 900+ listings from PDFs, web pages, photos and spreadsheets, and CRM lead-capture integration and GTM automations (sales funnel, lead enrichment, outbound) with n8n. I work with RAG, tool calling, MCP and the Claude and OpenAI APIs, integrate through APIs and webhooks, and gathered the requirements directly from the sales and operations team.

On the gaps: my Python is at working level, I have not used agent frameworks such as LangChain, LlamaIndex or CrewAI, and I have not done fine-tuning. My quality checks are human review and confidence thresholds. I have not worked with paid acquisition or attribution data, and my degree is not in computer science. I have about three years of experience.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Barcelona for the hybrid role. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
