Application: GTM Engineer, Langdock

Dear Hiring Team,

I am applying for the GTM Engineer role in Berlin. Spending time with a team, understanding the bottleneck, shipping a first version and improving it from what actually happens is how I work.

At FlowSpace I built CRM lead-capture integration and GTM automations (sales funnel, lead enrichment, outbound) with n8n. The workflow I would show you is the listing pipeline: an LLM ingestion pipeline with human review that drafted 900+ listings from PDFs, web pages, photos and spreadsheets, where a person reviews each draft before it is pushed to the backend, so AI output is checked and failures are handled. I also built support agents that answer against live platform data and escalate to a person on low confidence. I am comfortable with APIs, webhooks and structured data, use Claude Code to build and debug, and gathered requirements directly from the sales and operations team. My public GitHub, github.com/prab-gupta, includes llm-doc-parser.

On the gaps: I have not used Langdock or Clay. I have not owned pipeline targets, and I have not run controlled experiments measured on qualified pipeline or conversion. My quality checks are human review and confidence thresholds. My Python is at working level, alongside TypeScript. I have about three years of experience.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Berlin for the on-site role. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
