Application: AI Automation Engineer, Mercuryo

Dear Hiring Team,

I am applying for the AI Automation Engineer role. Understanding how a process really works before automating it, and then getting a tool into the hands of the people who use it, is the work I have done for three years.

At FlowSpace I built support agents that answer against live platform data and escalate to a person on low confidence, and an LLM ingestion pipeline with human review that drafted 900+ listings from PDFs, web pages, photos and spreadsheets, with a review step before anything reached the backend. I also built CRM lead-capture integration and GTM automations (sales funnel, lead enrichment, outbound) with n8n. I work with prompting, structured output, RAG, tool calling and MCP, and Claude Code is my default way of building. I gathered requirements directly from the sales and operations team and wrote the handover for what I shipped.

On the gaps: my quality checks are human review and confidence thresholds, and I have not built formal evaluation suites. I have no fintech, payments or compliance background, and I have not worked with Confluence or BambooHR integrations. My Python is at working level, alongside TypeScript. I have about three years of experience.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. Remote work suits me, and I am open to relocating to Cyprus. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
