Application: Forward Deployed Engineer, Sweden, Salesforce

Dear Hiring Team,

I am applying for the Forward Deployed Engineer role in Stockholm. I build agents that take real actions against live systems, and I like owning a component from the first design to something people depend on.

At FlowSpace I built support agents that answer against live platform data and escalate to a person on low confidence, and an LLM ingestion pipeline with human review that drafted 900+ listings from PDFs, web pages, photos and spreadsheets. I integrated the OfficeRnD and Nexudus APIs with OAuth and webhooks, and led a live migration off a legacy stack to a coded Next.js and Laravel product: I mapped the data model, chose the migration path per entity (API or CSV) and drove the cutover while the platform grew from 2,000 to 4,500+ users. I work in TypeScript with Claude Code and write Python at working level.

On the gaps, plainly: my degree is a Bachelor's in Philosophy, International Studies and Economics, not Computer Science. I have no Forward Deployed Engineer, consulting or professional services title; my customer-facing work has been delivery inside FlowSpace, working with the sales and operations team and an external agency, and I have not done pre-sales. I have not used the Salesforce platform and hold none of its certifications, and I have not used Java or Apex. I have not built agent performance dashboards or observability beyond human review and confidence thresholds, and I have not worked with cloud data platforms. I have about three years of experience in total.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Stockholm. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
