Application: Forward Deployed Engineer, Zauber

Dear Hiring Team,

I am applying for the Forward Deployed Engineer role. Sitting with a team, understanding the workflow and building a tool that fits it, in TypeScript and Node.js, is the work I enjoy.

At FlowSpace I built an LLM ingestion pipeline with human review that drafted 900+ listings from PDFs, web pages, photos and spreadsheets, which is a good test of messy data, and support agents that answer against live platform data and escalate to a person on low confidence. I integrated third-party APIs over REST, webhooks and OAuth, and led a live migration off a legacy stack to a coded Next.js and Laravel product while the platform grew from 2,000 to 4,500+ users. I worked directly with customers, the sales and operations team and an external agency.

On the gaps: I have no logistics background and have not worked with ERP or TMS systems, SFTP or event queues. I have not worked with Docker, Terraform, GCP or AWS, and I have not designed backend infrastructure at scale. My frontend work is in Next.js, and my Python is at working level. I have about three years of experience.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Berlin for the on-site role. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
