Application: Forward Deployed Engineer (AI Solutions), Aircall

Dear Hiring Team,

I am applying for the Forward Deployed Engineer (AI Solutions) role. Sitting between a customer's process and the AI agent that is meant to handle it, and making the two fit, is the work I enjoy most.

At FlowSpace I built support agents that answer against live platform data and use confidence thresholds and escalation to a person as guardrails, CRM lead-capture integration and GTM automations (sales funnel, lead enrichment, outbound) with n8n, and OfficeRnD and Nexudus integrations over REST APIs, webhooks and OAuth. I worked directly with customers, an internal team and an external agency, and led a live migration off a legacy stack. I use n8n and Make, Claude Code and MCP, and write JavaScript, TypeScript and Python when a workflow needs it.

On the gaps: I have not worked with HubSpot Workflows or Salesforce Flow, with telephony or contact-centre systems, or with BI tools such as Looker or BigQuery. My AI quality control is human review and confidence thresholds, not a formal evaluation and monitoring setup. I have not run internal workshops, and I have not owned revenue targets or run outbound campaigns for customers; my outbound work was automation.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Paris for the hybrid setup. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
