Application: Graduate AI Software Engineer, Bending Spoons

Dear Hiring Team,

I am applying for the Graduate AI Software Engineer role. You screen on verifiable signals rather than seniority, so I will keep to what I have actually built.

At FlowSpace I built support agents that escalate to a person on low confidence, an LLM ingestion pipeline with human review that drafted 900+ listings from PDFs, web pages, photos and spreadsheets, and booking integrations with the OfficeRnD and Nexudus APIs. I led the migration off a legacy stack to a coded Next.js and Laravel product, from mapping the data model to the cutover, while the platform grew from 2,000 to 4,500+ users. I work with Claude Code through design, implementation, testing and documentation, and review what it produces. My public code is at github.com/prab-gupta, including llm-doc-parser.

To be plain about the gaps: my degree is in Philosophy, International Studies and Economics, not computer science, and I learned engineering on the job. I have not worked in Rust, gRPC or Kubernetes, I have not built systems used by millions of people (my largest platform had 4,500+ users), and I have not worked on a microservices architecture at scale. I know the tests are demanding and I am ready to work through them.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Milan and spending the first months in your office. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
