Dear Gismart Hiring Team,

I am writing to express my enthusiasm for the AI Automation Engineer role supporting the FitMe project at Gismart. FitMe's mission of making active living effortless and accessible through bite-sized, accessible routines is exciting, and scaling that impact through intelligent automation of creative production, marketing pipelines, and LLM workflows is exactly where my expertise lies.

Over the past three years as Lead Developer at FlowSpace and as an AI Solutions & Automation Engineer, I have specialized in bridging low-code automation platforms with robust software engineering practices. I have architected and deployed automated workflows using n8n and Make, built structured low-code data models in Airtable and Supabase, and engineered production LLM agents using the OpenAI and Anthropic Claude APIs with structured schema enforcement. Additionally, I regularly implement automated scripts and end-to-end regression testing with Playwright to maintain uninterrupted pipeline execution.

My technical experience aligns closely with FitMe's key priorities:

- **Low-Code Orchestration & Databases:** Extensive hands-on experience building complex, multi-branch automation workflows in n8n and Make, integrating custom JavaScript/Node.js snippets, and structuring low-code databases in Airtable with clear status tracking and error handling.
- **LLM Integration & Tool Calling:** Proven record integrating LLM APIs (OpenAI, Claude) into production workflows, utilizing structured JSON outputs, prompt versioning, and fallback routing.
- **Creative & Media Automation Concepts:** Experience automating data transformations, asset cataloging, and content variation pipelines, with strong familiarity in media processing workflows and advertising API webhook architectures.
- **Autonomous End-to-End Ownership:** Seasoned in the complete delivery lifecycle: analyzing operational bottlenecks, designing reliable technical workflows, launching them into production, and monitoring logs and alerts for zero downtime.

Based in Venice, Italy, I hold an EU Long Term Residence Permit providing permanent, unrestricted right to work across the EU without requiring visa sponsorship. I work comfortably in remote-first environments across European time zones and am available immediately.

I would welcome the opportunity to discuss how my automation engineering skills can support FitMe's growth and creative operations at Gismart.

Kind regards,

Prabhavit Gupta
