Dear Finom Hiring Team,

I am writing to express my strong interest in the Senior AI Engineer (Remote) role at Finom. Having spent the last three years building, deploying, and evaluating production LLM systems and agentic workflows, I am inspired by Finom's mission to transform B2B financial services with intelligent automation, AI accounting, and seamless operational workflows.

In my role as Lead Developer at FlowSpace, I owned the design, implementation, and quality of our AI systems end-to-end. I built customer-facing support agents with live REST API function calling and tool use that answered user inquiries directly against live database state, with confidence thresholds and fallback routing to human review. To streamline data operations, I architected an automated knowledge extraction pipeline parsing heterogeneous documents into verified structured JSON records (900+ listings verified). Crucially, I established automated regression evaluation pipelines with Playwright and structured test suites to verify that prompt updates and schema changes improved rather than regressed model output fidelity.

Key areas of alignment with Finom's requirements include:

- **Production LLM & Agent Architectures:** Hands-on experience with OpenAI, Anthropic, LangGraph, tool calling, structured outputs, prompt engineering, and human-in-the-loop fallback mechanisms.
- **Evals & Quality Loops:** Practical approach to evaluating model behavior in production, measuring output fidelity, tracking errors, and iterating rapidly on prompts and retrieval schemas.
- **Backend & Integration Engineering:** Strong fundamentals with TypeScript, Node.js, working-level Python, PostgreSQL, REST APIs, webhooks, and asynchronous workflows.
- **Ownership & Product Mindset:** Proven track record taking messy problems from concept to live production systems, prioritizing speed, reliability, and measurable business impact.

Based in Venice, Italy, I hold an EU Long Term Residence Permit providing unrestricted right to work across the EU without requiring visa sponsorship. I am immediately available for remote work across European time zones.

I would welcome the opportunity to discuss how my hands-on background in agent systems and workflow engineering can contribute to Finom's next phase of growth.

Kind regards,

Prabhavit Gupta
