Application: AI Software Engineer, Treatwell

Dear Hiring Team,

I am applying for the AI Software Engineer role. The brief matches how I already work: build a small working version with the people who will use it, put it in front of them, and improve it from their feedback, using AI coding tools for the heavy lifting and taking responsibility for what ships.

At FlowSpace I built support agents that answer against live platform data and escalate to a person on low confidence, an LLM ingestion pipeline with human review that drafted 900+ listings, and booking automation through the OfficeRnD and Nexudus APIs (OAuth, webhooks). I also led the migration to a coded Next.js and Laravel product while the platform grew from 2,000 to 4,500+ users. Claude Code is my daily tool rather than Codex, and I work in TypeScript and Node.js, with Next.js and React on the front end. Booking is a problem I have already worked on, so a salon platform feels familiar.

To be straightforward about the nice-to-haves: I test with Playwright rather than Jest or Cypress, I have not used GitLab CI/CD, and I have not worked on AWS. I would pick each of them up quickly.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am based in Italy and happy to work remotely from here. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
