Application: Junior Forward Deployed Engineer, DevRev

Dear Hiring Team,

I am applying for the Junior Forward Deployed Engineer role. Building integrations and automations around a customer's workflow, with GenAI where it helps, is the work I have done since 2023.

At FlowSpace I integrated the OfficeRnD and Nexudus APIs with webhooks and OAuth, built CRM lead-capture integration and GTM automations (sales funnel, lead enrichment, outbound) with n8n, and built support agents that answer against live platform data and escalate to a person on low confidence, and an LLM ingestion pipeline with human review that drafted 900+ listings from PDFs, web pages, photos and spreadsheets. I write TypeScript, JavaScript and Python, work with SQL databases, and kept requirements and feedback flowing with the sales and operations team.

On the gaps: my degree is in Philosophy, International Studies and Economics, not software engineering, and I learned engineering on the job. My Python is at working level. I have not worked with vector databases and I have not used Golang. I have about three years of experience.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Ljubljana for the role. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
