Application: Customer Engineer, Mastra

Dear Hiring Team,

I am applying for the Customer Engineer role. Working with a team that is building real agent systems, and turning what breaks into something more repeatable, is the part of my work I enjoy most.

At FlowSpace I built support agents that answer against live platform data and escalate to a person on low confidence, and an LLM ingestion pipeline with human review that drafted 900+ listings from PDFs, web pages, photos and spreadsheets. I integrated third-party APIs over REST and webhooks, led a live migration off a legacy stack to a coded Next.js and Laravel product, and worked directly with customers, developers and an external agency. TypeScript is my main language, and I use Claude Code and MCP.

On the gaps: I have not used Mastra, and I have not contributed to open-source frameworks, although llm-doc-parser is public on my GitHub. My quality checks are human review and confidence thresholds, and I have not built evaluation strategies or monitoring for agents. I have not run training sessions for customers. I have about three years of experience.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I can work fully remotely in European time zones. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
