Application: Customer Engineer, Paraglide AI

Dear Hiring Team,

I am applying for the Customer Engineer role. Owning an integration from kickoff to go-live, and working out how to get the data flowing when there is no obvious answer, is the work I like.

At FlowSpace I integrated the OfficeRnD and Nexudus APIs with OAuth and webhooks, built an LLM ingestion pipeline with human review that drafted 900+ listings from PDFs, web pages, photos and spreadsheets, and led a live migration off a legacy stack: I mapped the data model, chose the migration path per entity (API or CSV) and drove the cutover while the platform grew from 2,000 to 4,500+ users. I worked directly with customers, the sales and operations team and an external agency.

On the gaps: I have not worked with ERP systems such as SAP, Dynamics or Oracle, or with SFTP-based integrations, and I have no back-office finance background. My Python is at working level, and I have not held an implementation engineer title. I have about three years of experience.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Malmo for the in-person role. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
