Application: Delivery Solutions Engineer, Trackunit

Dear Hiring Team,

I am applying for the Delivery Solutions Engineer role in Copenhagen. Configuring a solution around how a customer works, connecting it to their systems through APIs and webhooks, and handing it over cleanly is the part of my work I do best.

At FlowSpace I integrated the OfficeRnD and Nexudus APIs with OAuth and webhooks, and led a live migration off a legacy stack to a coded Next.js and Laravel product: I mapped the data model, chose the migration path per entity (API or CSV) and drove the cutover while the platform grew from 2,000 to 4,500+ users. I worked with customers, the sales and operations team and an external agency, troubleshot with Postman, and documented product and business logic with the developer team. I also built support agents that answer against live platform data and escalate to a person on low confidence.

On the gaps: I have no construction, IoT or telematics background, and I have not integrated ERP or fleet management systems. I have not used GraphQL or Databricks, and I have not run customer training workshops. My Python is at working level, alongside TypeScript, and my analytics experience is web analytics rather than equipment data. My degree is a Bachelor's in Philosophy, International Studies and Economics. I have about three years of experience.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Copenhagen for the hybrid role. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
