Hiring Team - AI Foundation Models
JetBrains
Madrid, Spain / Berlin, Germany / Prague, Czech Republic
Role: Staff Research Engineer (LLM Pre-Training)

Dear Hiring Team,

I am writing to express my strong enthusiasm for the Staff Research Engineer (LLM Pre-Training) position at JetBrains. As an engineer who relies on JetBrains developer tools daily, I admire your long-standing dedication to developer productivity and software craft. The ambition to develop proprietary foundation models for coding assistance and deploy them directly to millions of developers worldwide represents the most impactful frontier in developer tooling today.

Over the past three years, my engineering and research practice has centered on applied large language models, high-scale data ingestion, and rigorous empirical evaluation. My background aligns closely with your core requirements:

Dataset Curation & Pre-Training Data Infrastructure: I have designed and deployed automated data pipelines processing diverse code and documentation corpuses, leveraging AST parsing (tree-sitter) and deduplication algorithms to curate high-signal datasets for model adaptation. I understand the critical importance of data mixture weighting, synthetic generation of edge-case code samples, and filtering heuristics to maximize downstream model capabilities.

Deep Learning Infrastructure & High-Throughput Serving: I work with PyTorch, HuggingFace Transformers, and state-of-the-art serving frameworks including vLLM and TensorRT-LLM. I focus on optimizing latency and memory consumption, including PagedAttention and KV-cache management, ensuring models transition smoothly from research experiments into high-throughput production developer assistants.

Empirical Evaluation & Continuous Testing: I place paramount emphasis on automated evaluation rigor. I build continuous benchmarking test harnesses evaluating syntax correctness, unit test generation pass@k, and semantic adherence against coding benchmarks. This ensures model checkpoints maintain consistent quality and avoid regressions across training runs.

I hold an EU Long-Term Permanent Residence Permit (Permesso di Soggiorno UE a Tempo Indeterminato, Italy), giving me unrestricted legal right to live and work across the European Union (including Spain, Germany, Czech Republic, and the Netherlands) without visa sponsorship. I communicate fluently in English (C1/C2) and am available immediately for on-site or hybrid collaboration.

I welcome the opportunity to discuss how my passion for developer tooling, LLM engineering, and evaluation rigor can contribute to JetBrains AI foundation models.

Sincerely,

Prabhavit Gupta
