Dear Sofie Freund and the Intellishore Hiring Team,

I am writing to express my strong enthusiasm for the Forward Deployed AI Engineer position at Intellishore. The ethos of forward-deployed engineering—sitting down with a client on Monday, understanding the real friction beneath their workflows, putting a working prototype in front of them by Friday, and engineering it to hold up under real production scrutiny—reflects precisely how I operate as an engineer and builder.

Over the past three years as Lead Developer at FlowSpace and as an independent technical consultant, I have worked directly at the intersection of business discovery and production software delivery. I designed and deployed an autonomous production AI agent serving 4,500+ active users, grounded strictly in live PostgreSQL databases and partner operational APIs. To ensure reliability, I engineered schema-validated tool calling, strict guardrails, and automated evaluation against real production transcripts. Crucially, I know the difference between a prototype and a product: I architect systems with clear API contracts, relational data integrity, and automated testing suites using Playwright, designed for client teams to maintain, operate, and trust.

Key areas where my background directly connects with Intellishore's mission include:

- **Client Discovery & Technical Translation:** Direct experience listening to non-technical stakeholders, isolating core operational bottlenecks, and rapidly translating them into clear architectural specifications and production deliverables.
- **Applied Generative AI & Pragmatism:** Deep hands-on expertise with agentic runtimes, RAG pipelines, and prompt/context engineering—paired with the pragmatic judgment to deploy deterministic automation or rule-based logic when GenAI is not the optimal tool.
- **Full-Stack Engineering & Data Foundations:** Strong backend engineering in Python, modern frontend in TypeScript/Next.js, relational schema modeling in PostgreSQL, and containerized deployments using Docker and cloud infrastructure.
- **EU Authorization & Copenhagen Relocation:** As an EU Long Term Residence Permit holder, I possess unrestricted permanent work authorization across the EU without requiring visa sponsorship. I am based in Venice, Italy and am actively planning my relocation to Copenhagen to join the team on-site.

I would welcome the opportunity to speak with you and the team about how my forward-deployed delivery background can help Intellishore's healthcare and enterprise clients transform complex operational challenges into high-impact AI systems.

Kind regards,

Prabhavit Gupta
