Dear Cognition Hiring Team,

I am writing to express my enthusiastic interest in the Deployed Engineer - Europe role at Cognition. Embedding directly with customer engineering teams to deploy Devin, deeply integrating autonomous software agents into real-world codebases, and driving production adoption aligns directly with my background as an AI systems engineer and integration architect.
Over the past three years as Lead Developer at FlowSpace.co, as a solutions developer with Urlink in Barcelona, and as an independent technical consultant, I have operated extensively at the intersection of agent runtime orchestration, API tool integration, and production evaluation:

- **Autonomous Agent Deployment & Tool Use:** Hands-on builder of multi-step autonomous workflows and agent runtimes. Experienced designing schema-enforced tool execution, deterministic validation loops, intent routing, and fallback escalation to eliminate ungrounded answers.
- **Production Evaluation & Observability:** Built continuous evaluation loops that systematically analyze real execution traces and customer transcripts rather than synthetic benchmarks, diagnosing edge-case failures and enforcing deterministic guarantees.
- **Customer-Facing Technical Execution:** Proven track record working directly with technical stakeholders to translate ambiguous operational bottlenecks into concrete software specs, building custom integrations, and ensuring high user adoption across newly deployed systems.
- **Permanent EU Work Authorization & Mobility:** Holder of an EU Long-Term Residence Permit with unrestricted permanent work authorization across all EU member states without requiring visa sponsorship. Based in Venice, Italy and eager for 25–50% customer travel across Europe.

I would welcome the opportunity to discuss how my hands-on agent engineering experience, production evaluation focus, and relentless bias toward execution can help Cognition's customers successfully deploy and scale Devin across Europe.

Kind regards,

Prabhavit Gupta
