Application: Fullstack AI Engineer, CLAR AI

Dear Hiring Team,

I am applying for the Fullstack AI Engineer role in Munich. Building a feature end to end, from the data model and the API to the screen where a person reviews what the AI did, is the work I have done for about three years.

At FlowSpace I built an AI listing bot with a human in the loop: it takes a brochure in any format, drafts the full listing with an LLM, and pushes it to the backend only after review (900+ listings drafted). I also built support agents that answer against live platform data and escalate to a person on low confidence, and integrated the OfficeRnD and Nexudus APIs with OAuth and webhooks. I led a live migration to a coded Next.js and Laravel product while the platform grew from 2,000 to 4,500+ users. I work in TypeScript and Node.js, use tool use and MCP, and Claude Code is my default way of building.

On the gaps: I have not built evaluation systems, observability or CI/CD pipelines; my quality checks are human review and confidence thresholds. I have not built voice AI or multi-agent architectures, and I have not built a design system or shared component library. My Python is at working level, alongside TypeScript. I have about three years of experience, and my degree is a Bachelor's in Philosophy, International Studies and Economics.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Munich for the on-site role. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
