Application: AI Engineer, Gilion

Dear Hiring Team,

I am applying for the AI Engineer role in Stockholm. Giving AI agents the right tools and data, and keeping the services behind them working, is the work I have done for about three years.

At FlowSpace I built support agents that answer against live platform data and escalate to a person on low confidence, and an LLM ingestion pipeline with human review that drafted 900+ listings from PDFs, web pages, photos and spreadsheets. I integrated the OfficeRnD and Nexudus APIs with OAuth and webhooks, and led a live migration off a legacy stack to a coded Next.js and Laravel product while the platform grew from 2,000 to 4,500+ users. I connect agents to tools and data with function calling and MCP, and Claude Code is my default way of building.

On the gaps: my backend work is in Node.js, TypeScript and Laravel, with Python at working level, and I have not used Go. I have not worked in a microservice architecture, and I have no financial analysis or forecasting background. I monitor LLM features through human review and confidence thresholds, not tracing or evaluation tooling. My degree is a Bachelor's in Philosophy, International Studies and Economics.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Stockholm for the hybrid role. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
