Application: Applied AI Engineer, Moss

Dear Hiring Team,

I am applying for the Applied AI Engineer role. Building an agent, connecting it to the real backend and data, and keeping a person in the loop where a wrong answer is costly is how I have worked at FlowSpace.

There I built support agents that answer against live platform data and escalate to a person on low confidence, and an LLM ingestion pipeline with human review that drafted 900+ listings from PDFs, web pages, photos and spreadsheets, with a review step before anything reached the backend. I integrated third-party APIs over REST, webhooks and OAuth, and led a live migration off a legacy stack to a coded Next.js and Laravel product. I work with RAG, tool use and MCP, and use Claude Code.

On the gaps: I have about three years of experience, not a seasoned background in operating production systems. My Python is at working level, and I have not used Java, Kafka, microservices, GCP or Vertex AI. I have not used LangGraph, LangChain, LlamaIndex or Google ADK. My quality checks are human review and confidence thresholds, and I have not built systematic evaluations or observability for agents. I have no finance or fintech background.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Warsaw or Berlin for the hybrid role. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
