Application: Product Engineer, Integrations, Langfuse (ClickHouse)

Dear Hiring Team,

I am applying for the Product Engineer, Integrations role. I build LLM applications in Python and TypeScript, and I care about the developer who is trying to get something working late in the evening: few lines of code, clear errors, docs that run.

At FlowSpace I built support agents with tool use, an LLM ingestion pipeline with human review that drafted 900+ listings, and integrations with the OfficeRnD and Nexudus APIs, and I wrote the documentation and handover for what I shipped. I work directly against the Claude and OpenAI APIs and MCP and use Claude Code daily. I should be upfront: I have not yet built with LangChain, LlamaIndex, Pydantic AI or the Vercel AI SDK, I have not worked on OpenTelemetry internals, and I have not contributed to a major open source project. I would go deep on each framework, and I have a public GitHub at github.com/prab-gupta.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Germany. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
