Prabhavit Gupta

Solutions Engineer: AI Automations, API Integrations & Client Delivery

+39 349 718 1904 | prabhavitg@gmail.com | linkedin.com/in/prabhavit | github.com/prab-gupta | Venice, Italy (EU / Remote)

Summary

Solutions Engineer and Lead Developer with 3 years of hands-on experience designing, building, and deploying client-facing AI automations, enterprise API integrations, and e-commerce support pipelines. Proven background partnering directly with external client teams across technical scoping sessions, custom architecture design, and live troubleshooting—translating complex operational workflows into dependable AI agents with strict schema-enforced actions and automated evaluation loops. Deep practical specialization in API and webhook orchestration: developing custom Python integration scripts, connecting customer service platforms (Zendesk, CRM systems) and e-commerce tools, and automating multi-step business logic via low-code platforms (n8n, Make) and custom microservices. Holder of an EU Long-Term Residence Permit (permanent unrestricted EU work authorization across all member states without visa sponsorship); based in Venice, Italy and available for immediate remote engagement aligned with European business hours.

Technical Expertise

- **Solutions Engineering & Client Scoping:** Technical discovery, workflow mapping, architecture presentations, stakeholder alignment, live demos, production onboarding, post-launch troubleshooting and expansion.
- **AI Agent Configuration & LLM Engineering:** Prompt engineering, intent classification, schema-enforced tool execution, guardrails, fallback escalation to human operators, evaluation frameworks over production interaction traces.
- **API & Integration Engineering:** Python, RESTful APIs, webhooks, JSON schemas, authentication (OAuth2, API tokens), rate limiting, pagination, customer support integrations (Zendesk, Gorgias, CRMs), e-commerce workflows (Shopify APIs).
- **Automation & Orchestration Tools:** Low-code orchestration (n8n, Make, Zapier), custom Python action scripts, Model Context Protocol (MCP) servers, asynchronous background queues, webhook listeners.
- **Backend & Data Foundations:** TypeScript, Node.js, FastAPI, PostgreSQL, Supabase, Redis, structured data modeling, automated regression testing with Playwright, CI/CD pipelines, Docker containerization.
- **Languages & Authorization:** English (C1 Professional), Hindi (Native), Italian (Beginner). EU Long-Term Residence Permit (permanent unrestricted EU work authorization, no visa sponsorship required).

Experience

FlowSpace.co **Mar 2024 - Aug 2026**
Lead Developer & AI Systems Architect *London, UK (remote)*

- Architected, deployed, and owned the production AI customer support agent runtime serving 4,500+ active enterprise users, automating inquiries across booking changes, pricing, and venue inventory.
- Grounded agent execution against live operational datastores and external partner APIs (OfficeRnD, Nexudus) using strict JSON tool contracts and deterministic validation, eliminating hallucinated answers.
- Built automated evaluation loops analyzing real customer conversation transcripts to systematically detect failure modes, refine prompts, and establish deterministic fallback escalation to human agents.
- Programmed custom Python and TypeScript integration connectors, webhook handlers, and retry pipelines connecting the core platform with external CRM and support systems.
- Profiled latency and token expenditure across model providers, optimizing context window construction and prompt caching to maintain sub-second response times while reducing inference costs.
- Implemented automated end-to-end regression suites using Playwright, verifying API contracts and continuous deployment stability across booking and customer support flows.
- Led platform modernization from legacy codebase to modern Next.js and backend microservices, supporting 125% customer growth without operational downtime.

Urlink **Apr 2025 - Jul 2025**
Project Manager & Solutions Developer (Freelance) *Barcelona, Spain (remote)*

- Managed client discovery and solution architecture for bespoke web applications, defining technical specifications, API contracts, and integration milestones.
- Built automated validation and data synchronization pipelines connecting third-party services to PostgreSQL datastores, ensuring data integrity and zero malformed inputs.

- Established CI/CD deployment routines and automated quality checks to accelerate delivery cycles for client deliverables.

Independent Technical Consultant **Aug 2023 - Feb 2024**
AI Solutions & Automation Engineer *Venice, Italy*

- Delivered tailored AI automations, web data pipelines, and API integrations for European SME clients using Python, TypeScript, and workflow automation tools (n8n, Make).
- Automated manual, error-prone e-commerce and customer service processes into reliable event-driven systems with structured logging, retry mechanisms, and error alerting.
- Conducted technical scoping and client enablement sessions, training non-technical operations teams on managing automated flows and verifying outcomes.

Education

Ca' Foscari University of Venice **2020 - 2024**
BA in Philosophy, International Studies and Economics *Venice, Italy*

- Rigorous grounding in formal logic, analytical problem solving, systems analysis, and macroeconomic decision models.
