Application: Forward Deployed Data Engineer, EU, Datafold

Dear Hiring Team,

I am applying for the Forward Deployed Data Engineer role. Owning a migration for a customer from planning to handover, with AI doing much of the heavy work, is close to what I did on a smaller scale at FlowSpace.

There I led the move off a legacy stack to a coded Next.js and Laravel product. I mapped the data model, chose the migration path per entity (API or CSV), kept the customer-facing side informed and drove the cutover while the platform grew from 2,000 to 4,500+ users. I also built an LLM ingestion pipeline with human review that drafted 900+ listings from PDFs, web pages, photos and spreadsheets. I use Claude Code every day and review what it writes.

I want to be plain about the gaps, because this is a data engineering role: I have not held a data engineering or data consulting title, and I have not worked with dbt, Snowflake, Databricks or orchestration tools, or with stored procedures, streaming or incremental processing at warehouse scale. My SQL is at working level. My migration experience is a product migration, not a data platform migration. I have about three years of experience.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I can work fully remotely from Italy. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
