Application: AI Solutions Engineer, Proxima Fusion

Dear Hiring Team,

I am applying for the AI Solutions Engineer role. Finding the workflows that slow a team down and shipping an automation for them, then improving it with their feedback, is how I have worked for three years.

At FlowSpace I built support agents that answer against live platform data and escalate to a person on low confidence, an LLM ingestion pipeline with human review that drafted 900+ listings from PDFs, web pages, photos and spreadsheets, and CRM lead-capture integration and GTM automations (sales funnel, lead enrichment, outbound) with n8n. I connected systems through REST APIs, webhooks and OAuth, including Google APIs, and worked directly with non-technical sales and operations colleagues. I use MCP and Claude Code, and I write Python at working level.

On the gaps: I have not used LangGraph. I have not deployed services on Google Cloud (Cloud Run, Vertex AI) or worked with vector databases, Docker or Linux administration, and I have not built multi-modal image or video workflows. My Python is at working level. I would be learning the infrastructure side on the job.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Munich for the on-site role. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
