Application: Forward Deployed Engineer, Univers

Dear Hiring Team,

I am applying for the Forward Deployed Engineer role. Working with customers on a messy operational problem, building a first working version quickly and improving it from feedback, is the work I have been doing since 2023.

At FlowSpace I built support agents that answer against live platform data and escalate to a person on low confidence, an LLM ingestion pipeline with human review that drafted 900+ listings from PDFs, web pages, photos and spreadsheets, and OfficeRnD and Nexudus integrations over REST APIs, webhooks and OAuth. I led a live migration off a legacy stack while the platform grew from 2,000 to 4,500+ users, and worked directly with customers, the internal team and an external agency. I use Claude Code and review what it produces.

On the gaps: my degree is in Philosophy, International Studies and Economics, not in computer science, AI or another technical discipline, and I learned engineering on the job. I have no formal machine learning training, my Python is at working level, and I have no experience with IoT, sensor data or the energy sector.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Madrid for the on-site role. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
