Application: Applied AI Engineer, Epiminds

Dear Hiring Team,

I am applying for the Applied AI Engineer role. For the last three years I have been shipping LLM systems in a live product, and I like the part of the job you describe: deciding what tools a model gets, what it sees, and when a person steps in.

At FlowSpace I built support agents that call tools against live platform data and escalate to a person when confidence is low, and an LLM ingestion pipeline that turns PDFs, web pages, photos and spreadsheets into structured listings with human review (900+ drafted). I design the tool calls, structured outputs and review steps around the model, and I write TypeScript and Python. I use Claude Code daily and have worked with MCP.

I should be upfront about the gaps. I have not built my own agent framework or a sandboxed code-execution runtime, and my evaluation so far has been human review and confidence thresholds rather than a formal eval harness. I would be glad to grow into that work in a team that does it seriously.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), am open to relocating to Stockholm, and am available immediately. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
