Dear Cofactor hiring team,

I am applying for the Forward Deployed Engineer role in Stockholm. I have three years of professional experience in work that means sitting close to the people who do the job, understanding how the work actually happens, and then building the software that runs it end to end.

At FlowSpace I took over a live workspace marketplace and automated the migration of its data off a legacy stack onto Next.js and Laravel, mapping the old structure to the new one and driving the cutover while the product grew from 2,000 to 4,500+ users. I also built support AI agents that answer customer queries from live platform data and escalate to a human when confidence is low, and shipped CRM and GTM automations for lead capture and routing.

At Urlink I worked as project manager and AI-assisted developer, building the platform and its logic and implementing automations directly from client requirements, on Next.js, Supabase, Netlify and GitHub. Acting as the bridge between what a client actually needed and what got shipped is the part of that role closest to what Cofactor describes.

I hold Italian EU long-term resident status. I am not currently authorised to work in Sweden and would need the applicable employer-side permit or sponsorship process. I am ready to relocate to Stockholm and complete that process.

I would welcome the chance to talk through how I would approach encoding a first use case end to end.

Regards,
Prabhavit Gupta
