Dear DataDome Hiring Team,

I am writing to express my strong enthusiasm for the AI Engineer position on the Threat Research team at DataDome. As the digital ecosystem rapidly evolves toward autonomous agents, bots, and automated API interactions, ensuring trust and stopping fraud at millisecond latency is one of the most critical challenges in cybersecurity. The opportunity to apply generative AI, multi-agent frameworks, and automated analysis pipelines to accelerate threat detection and response directly resonates with my hands-on background.

Over the past three years as Lead Developer at FlowSpace and in consultant engagements, I have focused deeply on building and deploying production agentic systems and automated data workflows. I architected autonomous customer support agents utilizing live REST API function calling and tool use with strict confidence checks and fallback routing. Furthermore, I built an automated document ingestion pipeline with human-in-the-loop review that processed over 900 structured records, and implemented automated regression testing using Playwright to ensure high fidelity across production agent runs.

My practical experience aligns closely with what you are seeking at DataDome:

- **Agentic Systems & Tool Calling:** Hands-on experience designing multi-step agent workflows, schema validation, prompt engineering, and structured JSON outputs across OpenAI, Anthropic, and Gemini models.
- **Automation & Scripting:** Proven capability writing resilient Python scripts and automation pipelines (Playwright, n8n, Webhooks) to parse complex data structures, inspect events, and automate workflows.
- **Production Full-Stack Fundamentals:** Solid experience with RESTful APIs, asynchronous event handling, PostgreSQL, Supabase, and Dockerized environments.
- **Curious & Hacker Mindset:** High-ownership approach to understanding system edge cases, diagnosing anomalies, and prototyping working solutions rapidly.

Based in Venice, Italy, I hold an EU Long Term Residence Permit providing permanent, unrestricted right to work across the EU without requiring visa sponsorship. I am comfortable working fully remotely with regular visits to your Paris headquarters.

I would love the opportunity to contribute to DataDome's Threat Research team and help build the future of bot and agent trust management.

Kind regards,

Prabhavit Gupta
