Dear Papaya Global Hiring Team,

I am writing to express my enthusiastic interest in the AI Engineer role at Papaya Global. Architecting autonomous AI workflows and intelligent agents that connect deeply into core operational business systems across fragmented regulatory and compliance environments aligns directly with my engineering background.
Over the past three years as Lead Developer at FlowSpace.co, as a solutions developer with Urlink in Barcelona, and as an independent technical consultant, I have operated extensively at the nexus of workflow automation, API integration engineering, and applied LLM systems:

- **Autonomous AI Workflows & Orchestration:** Power-user and builder of multi-step automations combining orchestration platforms (n8n, Make), modern LLM agent frameworks (LangChain), and AI-native developer tooling (Claude Code, Cursor). Hands-on experience engineering reliable prompt templates, schema-enforced tool execution, and deterministic guardrails.
- **Mission-Critical Integrations & Data Pipelines:** Deep proficiency building and operating RESTful APIs, webhook event listeners, OAuth2 flows, and structured ETL synchronization pipelines across CRM datastores, relational databases (PostgreSQL), and third-party SaaS ecosystems.
- **Production Rigor & Evaluation:** Built automated evaluation harnesses analyzing real execution traces and conversation logs rather than synthetic benchmarks, establishing deterministic fallback escalation to human operators for high-risk edge cases.
- **Permanent EU Work Authorization:** Holder of an EU Long-Term Residence Permit with unrestricted permanent work authorization across Poland and all EU member states without requiring visa sponsorship.

I would welcome the opportunity to discuss how my hands-on AI orchestration and integration engineering experience can help Papaya Global accelerate the delivery of impactful AI workflow automations across your business functions.

Kind regards,

Prabhavit Gupta
