Application: Junior AI Coding Engineer, Enhesa (Brussels, Belgium)

Dear Enhesa Hiring Team,

I am writing to express my enthusiastic interest in the Junior AI Coding Engineer position supporting Enhesa's High Value Intelligence (HVI) team. My work over the past three years has centered on using AI-assisted development tools and automation to translate operational workflows into reliable, maintainable software solutions.

At FlowSpace, I regularly leveraged AI coding tools (Claude Code, GitHub Copilot) alongside Python and JavaScript to build internal utilities, scrape and process complex property datasets across 9 operators, and automate CRM workflows via REST APIs and webhooks. Furthermore, I developed automated query workflows and created clear standard operating procedures (SOPs) and technical documentation ensuring team members could independently run and audit each automation.

I hold an EU Long-Term Residence Permit with unrestricted authorization to work across Belgium and all EU member states without requiring visa sponsorship. I am based in Venice, Italy (CET), fully open to relocation to Brussels or hybrid work, and available immediately.

Thank you for your time and consideration.

Kind regards,
Prabhavit Gupta
