Prabhavit Gupta

Forward Deployed Engineer: API Architectures, Webhooks & Enterprise Integrations

+39 344 427 9427 | prabhavitg@gmail.com | linkedin.com/in/prabhavit | github.com/prab-gupta | Venice, Italy (EU / Remote / Relocation Ready)

Summary

Forward Deployed Engineer and Lead Developer with 3 years of hands-on production experience architecting, implementing, and maintaining high-throughput REST API integrations, event-driven webhook consumers, and resilient data pipelines. Deep practical expertise operating directly alongside customer engineering teams to scope technical requirements, translate ambiguous data models into strict schemas, and deploy production-grade software inside client environments. Experienced building with Python (FastAPI, asyncio), TypeScript/Node.js, PostgreSQL, Redis retry queues, and idempotency mechanisms across complex third-party SaaS ecosystems. Proven track record leading end-to-end partner integrations from pre-sales scoping to zero-downtime go-live. Holder of an EU Long-Term Residence Permit (permanent unrestricted EU work authorization across all member states); based in Venice, Italy and available for immediate deployment and relocation.

Technical Expertise

- **Integration & API Architecture:** RESTful API design, webhook consumers, event-driven architectures, OAuth 2.0/OIDC auth flows, JSON Schema validation, rate-limiting, idempotency keys, and automated backfill strategies.
- **Data Pipeline & Reliability:** Asynchronous queues (Redis, Celery), data normalization layers, error handling, dead-letter alerts, automated retry policies, and telemetry monitoring.
- **Software Development:** Python (FastAPI, async services, scripts), JavaScript/TypeScript, Node.js, Next.js, SQL/PostgreSQL schema modeling, Docker containerization.
- **Customer-Facing Engineering:** Technical discovery, architecture reviews, proof-of-concept delivery, embedded customer co-building, root-cause incident triage, reference implementations, and SDK documentation.
- **Testing & Observability:** Automated integration test harnesses (Playwright, PyTest), trace analysis over production payloads, API contract verification, and CI/CD pipelines.
- **Languages & Authorization:** English (C1 Professional, fluent), Hindi (Native), Italian (Beginner). EU Long-Term Residence Permit (permanent unrestricted EU work authorization across all EU member states, no sponsorship required).

Experience

FlowSpace.co **Mar 2024 - Aug 2026**
Lead Developer & Integration Architect *London, UK (remote)*

- Architected and maintained the production event-driven integration runtime serving 4,500+ active enterprise users, synchronizing live booking data, availability, and user credentials across partner platforms.
- Designed resilient webhook listeners and asynchronous data processing pipelines connecting third-party platforms (OfficeRnD, Nexudus, Stripe) with core datastores, maintaining 99.9% uptime.
- Implemented strict JSON Schema validation and automated retry queues with exponential backoff and idempotency guards, eliminating data duplication and lost events during high-volume spikes.
- Partnered directly with enterprise customer technical leads and integration partners during discovery, mapping disparate partner data schemas into a unified, reliable platform model.
- Built automated regression test suites using Playwright, verifying API contracts and continuous deployment stability across end-to-end customer booking and payment flows.
- Profiled latency and throughput across API endpoints and queue workers, optimizing payload structures and database indexing to achieve consistent sub-second synchronization.

Urlink **Apr 2025 - Jul 2025**
Project Manager & Solutions Developer (Freelance) *Barcelona, Spain (remote)*

- Led technical discovery and integration architecture for bespoke client web applications, defining API specifications, authentication flows, and milestone roadmaps.
- Built automated data synchronization pipelines connecting third-party external services to PostgreSQL datastores, ensuring data freshness and relational integrity.
- Built customized proof-of-concept prototypes to validate client data requirements prior to sprint execution, accelerating delivery cycles and customer sign-off.

Independent Technical Consultant **Aug 2023 - Feb 2024**

Integration & Automation Engineer *Venice, Italy*

- Designed, deployed, and supported tailored API integration pipelines, webhook consumers, and automation workflows for European enterprise and SME clients using Python and modern orchestration tools.
- Replaced fragile manual data transfers with robust automated sync pipelines featuring structured logging, rate-limit throttling, and alerting.
- Conducted technical onboarding, stakeholder walkthroughs, and developer documentation, ensuring smooth adoption and high reliability.

Education

Ca' Foscari University of Venice **2020 - 2024**
BA in Philosophy, International Studies and Economics *Venice, Italy*

- Rigorous grounding in formal logic, analytical problem solving, systems analysis, and macroeconomic decision models.
