Dear Lighthouse Hiring Team,

I am writing to express my enthusiastic interest in the Senior AI Solutions Engineer for Revenue & Go-To-Market role at Lighthouse. As an engineer specializing in autonomous agent workflows, enterprise API integrations, and GTM systems, I have spent the last three years turning complex operational problems into scalable, reliable AI solutions. The mission of embedding AI directly into Revenue and Go-To-Market teams to optimize sales velocity and workflow efficiency aligns directly with my hands-on background.

In my role as Lead Developer at FlowSpace, I owned our GTM automations and internal integration architecture end-to-end. I built automated multi-step pipelines for lead capture, lead enrichment, and sales funnel orchestration across heterogeneous platforms and CRMs, replacing error-prone manual administrative processes. To scale operations, I architected and deployed autonomous customer support agents utilizing live REST API function calling and tool use with confidence evaluation and human escalation. Furthermore, I built an automated document parsing pipeline that extracted structured schemas from over 900 records, and developed automated verification workflows using Playwright and n8n.

Key areas of alignment with Lighthouse's requirements include:

- **AI Agent Workflows & Orchestration:** Hands-on expertise designing, testing, and shipping multi-step agent pipelines, prompt engineering, structured JSON outputs, and LLM evaluation across Anthropic, OpenAI, and Google Gemini models.
- **GTM & Systems Integration:** Direct experience connecting business systems, CRM workflows, and third-party APIs with idempotent event handling and automated webhook reconciliation.
- **Software Engineering Foundations:** Solid proficiency with TypeScript, Node.js, working-level Python, SQL, REST APIs, and automated testing with Playwright.
- **Outcome-Focused Delivery:** Proven track record working directly with cross-functional stakeholders, rapidly translating ambiguous business requirements into high-impact production solutions.

Based in Venice, Italy, I hold an EU Long Term Residence Permit providing unrestricted right to work across the EU without requiring visa sponsorship. I work comfortably in remote and distributed environments and am immediately available to join your team.

I would welcome the opportunity to discuss how my technical and workflow engineering background can help drive Lighthouse's commercial and revenue AI operations forward.

Kind regards,

Prabhavit Gupta
