Application: AI Engineer - 4 Day Week + Remote, Laminar Projects (Shape)

Dear Hiring Team,

I am applying for the AI Engineer role. You asked why I want to join and where I could make the most impact, so I will answer both directly.

Why Shape: you started as a construction consultancy and built software from what you learned on real projects, and you want an AI engineer who picks the lean option over the large one. That is how I work. At FlowSpace I was the lead developer on a product that grew from 2,000 to 4,500+ users, and I prefer shipping a small useful feature and iterating on feedback to designing something large up front. A team that gives honest, candid feedback and a four day week built around results is the environment I want to grow in.

Where I could help most: turning messy project documents into structured data, and putting assistants inside the app that are safe to trust. At FlowSpace I built an LLM ingestion pipeline with human review that drafted 900+ listings from PDFs, web pages, photos and spreadsheets, and support agents that answer against live platform data and escalate to a person on low confidence. I use the Claude and OpenAI APIs, RAG, tool use, MCP and prompt engineering, write TypeScript, Laravel and Python, and build with Claude Code. I would start with the Product team on one concrete use case, ship it in a thin form, and agree with the SREs what it needs before it goes wider.

On the gaps, plainly: my RAG work is lighter than your production requirement, and I have not run vector databases such as Pinecone, Weaviate or FAISS in production. I have not used LangChain or Transformers, fine-tuned a model, or built multi-model evaluation; my quality checks so far are human review and confidence thresholds. I have no MLOps or inference observability experience, and I have not worked with Docker or Kubernetes in production. My Python is at working level, alongside TypeScript. I have about three years of experience, and my degree is a Bachelor's in Philosophy, International Studies and Economics.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. The role is remote, which suits me well. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
