Application: Forward Deployed Engineer (f/m/d), Omnisent, Munich

Dear Hiring Team,

I am applying for the Forward Deployed Engineer role. You asked for my personal interests, what drives me, why this role fits and why Omnisent, so I will take them in turn.

Why Omnisent: you were founded in 2025, you are a small team in Munich, and you are building a fully autonomous Counter-UAS system, OmniDome, with a clear mission of redefining airspace security. What draws me is that this role puts the engineer next to the customer: the primary engineering contact on-site, adapting software to the customer's real environment and sending what is learned back into the product. I want to work where my code meets real operations, in a small team where one person carries real responsibility.

Why the role fits: integrating a product with a customer's systems is what I have done at FlowSpace, where I was lead developer. I integrated the OfficeRnD and Nexudus APIs for automated bookings, built CRM lead-capture integration and GTM automations with n8n, and led the migration off a legacy stack to a coded Next.js and Laravel product, choosing the migration path per entity (API or CSV) and driving the cutover while the platform grew from 2,000 to 4,500+ users. I also built an LLM ingestion pipeline with human review that drafted 900+ listings, and support agents that escalate to a person on low confidence. I coordinated between the internal team and an external agency and documented product and business logic, so turning what people need into clear engineering work is familiar to me.

Personal interests, plainly: my CV has no hobbies section and I will not invent any. My interests are professional and you can check them on my CV and GitHub (github.com/prab-gupta): building AI agents and automation tools, using Claude Code to build faster, and shipping small, useful features and iterating on real feedback. Hindi is my native language, my English is professional, and my Italian is at beginner level.

On the gaps, plainly: I have no defense or government background, and I have not worked with hardware, sensors or C2 platforms. My integrations so far are software and API integrations, and my customer-facing work has been on the delivery side rather than in a titled forward deployed or solutions engineering role. I have about three years of experience, and my degree is a Bachelor's in Philosophy, International Studies and Economics.

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Munich for an on-site or hybrid setup. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
