Dear AI Futures team,

I am writing to apply for the Founding Forward Deployed Engineer role with your VC-backed AI start-up client. I have spent the last three years embedded in production environments, taking over live systems and turning ambiguous customer problems into working software, which is the core of what a founding forward deployed engineer does.

At FlowSpace, a live workspace marketplace, I took over the platform and automated its data migration off a legacy stack onto Next.js and Laravel, mapping the data model entity by entity and driving the cutover while the product stayed live and grew from 2,000 to 4,500 plus users. I also built and own an AI listing bot that takes a workspace brochure in any format, PDF, website, photo or spreadsheet, and drafts a full listing with a human in the loop, and I built support AI agents that answer customer queries from live platform data and escalate to a person on low confidence.

At UltraStrategy, I built a CV parsing pipeline integrated into the platform. A user uploads a CV, the pipeline extracts the data and scores how relevant that person is for specific roles, the result is shown in the frontend, and a standardised Ultra CV is then generated, using Affinda and the Claude API for parsing and generation.

I am comfortable working directly with customers, debugging live deployments under pressure, and turning a vague problem into a scoped technical plan, and I use Claude and Claude Code daily in my own workflow. I hold Italian EU long-term resident status. I am not currently authorised to work in Germany and would need the applicable employer-side permit or sponsorship process. I am ready to relocate and complete that process, and glad to travel to customer sites as needed.

I would welcome the opportunity to discuss how I could contribute to this role.

Regards,
Prabhavit Gupta
