Dear Hiring Manager,

I am applying for the AI / Agent Systems Engineer role at ATOSS Software SE.

At FlowSpace, I designed and operated agentic systems that own full process chains end to end, not isolated tasks. I built an LLM extraction pipeline that reads brochures in any format, PDF, website, spreadsheet or photo, and drafts structured listings validated by a human reviewer, producing over 900 listing records for a live marketplace. I built support AI agents backed by retrieval over live platform data, with confidence scoring that escalates to a person when the model is unsure. I shipped production n8n automations for CRM and outbound, and integrated OfficeRnD and Nexudus for automated bookings. My stack is Python and TypeScript, and I use coding agents including Claude Code daily.

ATOSS's mission to apply AI internally across Sales, Marketing, Customer Success, HR and Finance, and to measure real KPI impact instead of shipping one off PoCs, matches how I already work.

I am based in Venice, Italy. I am authorised to work from Italy under my Italian EU long term resident status and can perform the role remotely from Italy, so no sponsorship is needed.

Regards,
Prabhavit Gupta
