Dear AVEVA CT Office Incubation Team,

I am applying for the Full Stack Developer role on the CT Office Incubation Team in Milan. I have three years of experience building end-to-end prototypes and production features with AI-assisted development, and I enjoy turning early-stage ideas into working software across the whole stack.

At FlowSpace, I took over a live workspace marketplace and automated its data migration from a legacy stack onto Next.js and Laravel, keeping the product live throughout the cutover while the platform grew from 2,000 to 4,500+ users. In the same role I built and own an AI listing bot: given a brochure in any format (PDF, website, photo or spreadsheet), it extracts and drafts a full listing with a human in the loop before it reaches the backend, producing more than 900 draft listings, and I integrated the OfficeRnD and Nexudus APIs for automated bookings. Claude Code has been part of my day-to-day workflow on this project, reviewing and validating generated code before it ships, which matches how your team expects AI-assisted coding tools to be used.

At Urlink, working directly with the client on requirements, I built the platform and its logic with AI-assisted development and implemented the automations the client needed, iterating quickly in a small team setting close to how your Incubation Team validates new concepts.

I am comfortable working across frontend, backend, APIs and data integration, and with the ambiguity of an early-stage prototype. I am based in Venice, Italy, hold an EU Long Term Residence Permit, am authorised to work in Italy without sponsorship, and am available for the Milan hybrid arrangement and occasional travel for workshops and demos.

I would welcome the opportunity to discuss how I could contribute to the Incubation Team.

Regards,
Prabhavit Gupta
