Dear Hiring Manager,

I am applying for the Forward Deployed Engineer Manager role at Accenture Italia in Milan.

At FlowSpace, I took over a live workspace marketplace and automated its data migration off a legacy stack onto Next.js and Laravel, mapping the old structure to the new one, choosing the migration path per entity and driving the cutover while the product stayed live, growing the platform from 2,000 to over 4,500 users. I built and own an AI listing bot that takes a workspace provider's brochure in any format and drafts a full structured listing with a human in the loop, over 900 drafts produced, and support AI agents that ground answers in live platform data and escalate to a human on low confidence. I built these with the Claude API, n8n for orchestration and TypeScript, plus OfficeRnD and Nexudus API integrations and CRM and GTM automations, owning the outcome end to end with a real client rather than a delivery milestone.

At UltraStrategy, I built a CV-parsing pipeline where a user uploads a CV, the pipeline extracts the data with Affinda and the Claude API and scores how relevant the candidate is for specific role types, the result is delivered to the frontend, and a standardised profile is generated with n8n and Eden AI, a multi-tool pipeline of exactly the shape this role calls production ready.

I want to be direct about fit. I have three years of professional experience across eight European companies, not the extensive multi-year track record the Manager level implies, and I have not formally managed a team of engineers or owned P&L-level commercial metrics, though I have worked directly with agency partners and non-technical stakeholders to translate requirements into shipped production systems. My English is professional working proficiency and my Italian is conversational.

I am an Italian EU long-term resident, authorised to work in Italy without sponsorship, and available to work from Milan.

Regards,
Prabhavit Gupta
