Dear Accenture na Slovensku hiring team,

I am applying for the Senior Integration Low-Code Developer role. My three years of professional experience are built almost entirely on low-code and automation platforms connected to real APIs, which is the core of this role.

At FlowSpace, I integrated external APIs, OfficeRnD and Nexudus, for automated bookings, developed the integration between our CRM and lead sources to automate lead capture, and built GTM automations for the sales funnel, lead enrichment and outbound, using n8n and Claude Code as my core tools. I also worked with the team to evaluate and migrate the platform's architecture off a legacy stack onto Next.js and Laravel while it stayed live in production.

At Clubee, I worked as a Low Code Developer, integrating the Clubee API across the frontend and running unit testing and quality assurance on new features, close to the code-quality and review responsibilities this role describes. At Get2Germany, I integrated Google APIs and worked on database optimisation, and at UltraStrategy I built a CV-parsing automation using n8n and Eden AI, my strongest example of n8n as a production integration and automation tool rather than just a prototyping one.

I hold Italian EU long-term resident status. I am not currently authorised to work in Slovakia and would need the applicable employer-side permit or sponsorship process; I am ready to work from Italy or relocate, whichever the role needs, and available immediately.

Regards,
Prabhavit Gupta
