Dear Accenture UK & Ireland Hiring Team,

I am writing to apply for the Forward Deployed Engineering Manager role in Dublin. Over the past three years I have worked embedded with clients, turning ambiguous business problems into production AI systems and owning the outcome rather than a delivery milestone, which is the substance of this role.

At FlowSpace, I took over a live workspace marketplace and automated its migration off a legacy stack onto Next.js and Laravel while the product stayed live, growing the platform from 2,000 to 4,500 plus users. I built and still own an AI listing bot that turns a workspace provider's brochure, in any format, into a drafted listing with a human in the loop, producing over 900 drafts, and I built support AI agents that answer customer queries from live platform data and escalate to a person on low confidence. I also shipped OfficeRnD and Nexudus API integrations for automated bookings and CRM and GTM automations for the sales funnel.

At Urlink, I worked as project manager and AI-assisted developer on a freelance engagement in Barcelona: I built the platform and its logic with AI-assisted development, implemented automations driven directly by client requirements, and worked on Next.js, Supabase and Netlify. That role meant owning client requirements end to end and translating them into a working system on my own.

I want to be direct about fit: I have three years of experience against a role that expects people-management and P&L ownership at a larger scale, and I do not hold a formal team-lead title. What I bring is a track record of owning technical outcomes solo in client-embedded settings, from architecture decisions through to production cutover, which is the same accountability this role is built on.

I hold Italian EU long-term resident status. I am not currently authorised to work in Ireland and would need the applicable employer-side permit or sponsorship process. I am ready to relocate to Dublin and complete that process.

I would welcome the opportunity to discuss how I could contribute to the Forward Deployed Engineering team.

Regards,
Prabhavit Gupta
